Course content

Why Attend

The global oil and gas industry is shaped by complex supply chains, geopolitical dynamics, regulatory frameworks, and volatile market conditions. Managing business operations in this sector requires a deep understanding of international markets, commercial strategies, risk management, and project execution. This course equips professionals with the knowledge and tools to effectively manage oil and gas businesses across upstream, midstream, and downstream operations. Participants will gain insights into global energy markets, investment decision-making, contract management, and strategic planning to enhance competitiveness and profitability.

Course Methodology

This course combines strategic business theory with real-world oil and gas case studies. Participants will engage in interactive discussions, scenario analysis, and group exercises focused on international operations. Practical workshops will cover market analysis, contract negotiation, financial evaluation, and risk management. Case studies from major global energy projects will provide applied insights into business decision-making in the sector.

Course Objectives

By the end of this course, participants will be able to:

- Understand the global oil and gas value chain and market dynamics
- Analyze international energy markets and pricing mechanisms
- Develop business strategies for oil and gas operations
- Manage contracts, joint ventures, and partnerships
- Evaluate investment opportunities and financial performance
- Identify and mitigate risks in international operations
- Understand regulatory and geopolitical impacts on the industry
- Enhance decision-making in complex energy business environments

Course content
